

# PRÁCTICA 1. Busca e instala un servidor de mensajería instantánea *Jabber/XMPP* de libre distribución para GNU/Linux o Windows.

Comenzamos la instalación de Openfire

La instalación se ha completado

NOS APARECE ESTA PANTALLA Y LE DAMOS A Launch Admin

Elegimos el lenguaje

Configuramos el servidor

Ponemos base de datos interna

En la siguiente pantalla dejamos todo por defecto

Configuramos la cuenta del administrador

vimoru@hotmail.

Contraseña del administrador: inves

Completamos la configuración

Para entrar ponemos admin y contraseña inves

Entramos y vemos la información del servidor

Propiedades del servidor

Configuración de correo

## Usuarios y grupos

Creo un usuario nuevo  
Vicen y contraseña invés

Vemos las propiedades del usuario

Creamos un segundo usuario

**PRÁCTICA 2. Busca e instala un cliente de mensajería instantánea *Jabber/XMPP* para GNU/Linux o Windows.**

**Instalamos spark**

## Descargamos el cliente spark

Procedemos a su instalación

Una vez instalado nos muestras esta pantalla para conectarnos

Nos conectamos

Nos conectamos poniendo usuario vicen contraseña inves y servidor la dirección del servidor(dirección de la máquina donde tenemos instalado el servidor) 10.33.13.20

Ahora instalamos el cliente spark en otro cliente xp para comprobar la comunicación entre dos usuarios

Usuario morales, contraseña invesy servidor 10.33.13.20

Dirección del cliente

En el cliente vican agregamos a morales

Vemos las sesiones de conexión

Una vez conectamos vemos que estamos en línea

Desde el otro cliente vemos que se ha realizado la conexión y que existe una conversación entre los dos usuarios
